## CCIM History by the Decades

## The Calculators

\&

## The Calculations

There is evidence that interest was calculated and charged for purchases of goods and for loans as early as c. 5000 BC , if not earlier, and records indicate rates of 10-25 percent. (Wikipedia)

## $\mathbf{1}^{\text {st }}$ known calculator - The Abacus 2700-2300 BC in Sumeria, then to Egypt, Greece and China

## A main concern of ours in Commercial Real Estate is the Capital Market (CI-101)

## Investors Acquire Buildings

Value Based On Return

Relationship of Value to NOI

Supply and Demand Determine NOI

## Capital Market \& Cap Rates

## The Anatomy of a Cap Rate*

- Cap rate quantification began with L. W. Ellwood an appraiser in NJ
- "Ellwood Tables for Real Estate Appraising and Financing" first published in 1959
- One basic flaw of Ellwood's formula is it's complexity
- Charles Akerson simplified it in 1970 with Band of Investment theory
*Marketing Investment Real Estate-Finance Taxation Techniques by Messner, Schreiber, Lyon \& Ward

## Calculators from 1940 through 1975

Monroe-High speed adding calculator-1940
https://www.dropbox.com/s/d7okb0db8n5nwy2/HP\ Computer\ Video\ Clip.mpg? $\underline{\mathrm{dl}=0}$

## Let's take a quick look at the Ellwood tables and please stay awake!

 MONTHLY COMPOUNI INTEREST TABLEEFPECTIVE RATE $=5 / 12 \% \quad$ CASE $=1.08816838+$

| 20 | 2.712640 | 411.033670 | . 002433 | 368645 | 151.525313 | . 006600 | 240 |

- Column 1 - Amount of 1 at compound interest

Example - What will $\$ 10,000$ grow to in 20 years at $5 \%$ compounded monthly? $(\$ 10,000 \times 2.712640=\$ 27,126.40)$

- Column 2 - Accumulation of 1 per period

Example - If I deposit $\$ 1,000 / \mathrm{mo}$. For 20 years at $5 \%$ what is the future value? $(\$ 1,000 \times 411.033670=\$ 411,033.67)$

- Column 3-Sinking Fund factor

Example - How much to put in every month to grow to $\$ 100,000$ in 20 years at $5 \%$ ? (\$100,000 x . 002433 = \$243.29)

- Column 4 - Present value reversion of 1

Example - How much to pay for a bond that will be worth $\$ 100,000$ in 20 years, paying $5 \%$ ? (discounting) ( $\$ 100,000 \times .368645=\$ 36,864.45$ )

- Column 5 - Present value ordinary annuity 1 per period

Example - Annuity pays $\$ 300 / \mathrm{mo}$. at $5 \%$ over 20 years, how much do you pay for it? PV? ( $\$ 300 \times 151.525313=\$ 45,457.59)$

- Column 6 - Installment to Amortize 1

Example - What's the monthly payment to amortize a \$100,000 loan at 5\%, monthly, 20 years? $(\$ 100,000 \times .006600=\$ 659.95)$

HP-80 \$400 (1973) wt. 8.7 oz.
